

Developing the design process.... Nightlight project

Developing our research abilities through client interviews and product analysis,

Developing our design abilities through experimentation, development and modelling.

Developing our making skills by focusing on CAD/CAM and electronics.

Developing our evaluation skills through reflection, sharing opinions and suggesting improvements

Developing the technical knowledge that runs parallel to the design process.

Understanding the design process... Clock project

Understanding how and why we conduct client interviews and product analysis,

Understand how and why we create exciting designs through experimentation, development and modelling.

Understand how to use appropriate tools and machinery to construct successful products.

Understand how to conduct successful evaluations through reflection, sharing opinions and suggesting improvements

Understand a range of technical knowledge that runs parallel to the design process.
